

ACL Initiative Project Report

Name of project lead	Gail Hudson
Name of organisation	College of Continuing Education Walsall MBC

Brief description of what you proposed to do

Use computer and camera together with families to enhance family learning sessions and improve technology skills in adults

Summary of your project *(How did your organisation integrate the mini laptops and camera into e-learning in your Adult Education Service?)*

Adults took photographs around a familiar area, using camera after a brief introduction/tutorial. They created an environmental trail for their children to follow by downloading the pictures onto the Eee PC and added relevant questions before printing them off.

Evaluation of project

The project was interesting and went well but more confident adults tended to take charge of the camera and computer. It would have worked very well if we had more computers and cameras available for use. The adults enjoyed the challenge of downloading photographs as they have very limited ICT experience.

Learners did gain confidence in using technology for learning.

Project outputs

--

Any plans for the future?

We will continue to include this activity when delivering specific courses.

The college will hopefully invest in some more Eee PCs and mobile internet access which will greatly widen the scope for use in the future.
